

ABSTRACT**5 Assembly comprising a mobile telephone
and an auxiliary memory**

10 Assembly comprising a mobile telephone supplied by a self-contained
power source, an auxiliary memory and a charger arranged to charge the
power source, the said telephone being provided with a memory
arranged to store therein data of the operator and data introduced by an
owner of the telephone. The loading of the data stored in the memory of
15 the telephone to the auxiliary memory is carried out on the basis of the
detection of a charging of the power source.
